# max II

- Here's the best friend of the farmer, the construction worker and all outdoor workers.
- MAX II. Six driving wheels to take you where others fear to tread. Through the fields, up 45° hills. Cross that stream or pond because MAX II is amphibious. And look out swamps. MAX II never dreams of quitting. In winter too, MAX II will go in most snow conditions and keeps going when the snow turns to mud.
- For years, MAX II is the favorite of ranchers, cattlemen, real estate developers, construction crews and thousands of other outdoor workers.
- The features are great.
- Electric start, Skid Steer Transmission with reverse gear, sealed beam headlights, five-inch steel channel frame, almost unbreakable body of density polyethelene.
- It comes with a 2 or 4 cycle engine.
- The 2-cycle is a Kawasaki 436 cc, 38 h.p. with speeds of 45 mph on land and 2-4 mph in water.
- The 4-cycle is a Tecumseh 453 cc, 16 h.p. with speeds of 20 mph on land and 2-4 mph in water.

# max IV

- Here is the most advance of all ATVs in the world. Only 10 inches longer than MAX II, but holds four full-sized people comfortably, or a 1000 lbs payload.
- MAX IV is loaded with features. Those four passengers sit on padded bench-type seats. There's an industrial type air cleaner, float carburetor, ball bearing idlers and a 7-gallon fuel tank.
- The MAX IV is also amphibious, great on snow and just about unstoppable in mud and muck.
- It has the same standard features as the MAX II. Electric start, sealed beam headlights, tail lights, Skid Steer transmission with reverse gear and the almost unbreakable HDPE body.
- Comes with a 2 and 4 cycle engine with approximately the same performance characteristics as a MAX II.

# TRAK-max II

# TRAK-max IV

- This is the ultimate All-Terrain Vehicle.
- Snow too deep for your snowmobile? TRAK-MAX will keep going. Mud so deep and sloppy you can't walk? TRAK-MAX will take you through. Two continuous rubber tracks will give you 1800 square inches (11,614 square centimeters) on the ground with a net ground pressure of .6 (six-tenths) of a pound per square inch. The tracks can be removed in approximately 15 minutes to return the vehicle to a standard wheeled ATV. It's still amphibious with the tracks on.
- Available as a TRAK-MAX II or a TRAK-MAX IV.
- Available with a 2-cycle or 4-cycle engine.
